

Visual Pigments and Pupil Shape in Various Species

Philip Trammell

Visual Receptors

- G-Protein Coupled Receptors
- Vertebrate opsins - subdivided into Rhodopsin and four types of cone opsins (λ_{\max}) (Takenaka 2007)(Davies 2009)

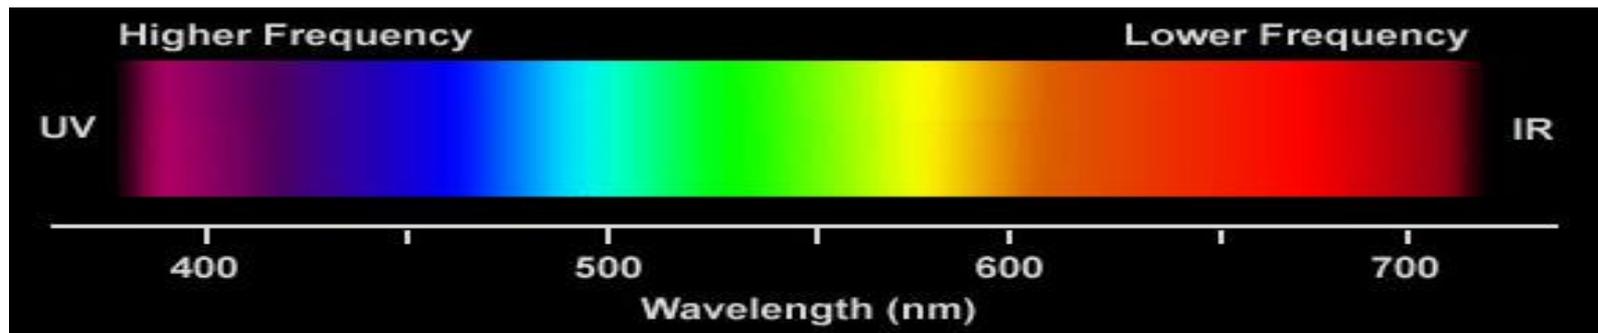

<http://blogs.scientificamerican.com/thoughtomics/2012/11/20/animal-vision-evolved-700-million-years-ago/>

Table 1: Absorption of each class of opsin

Opsin class	λ_{\max}	Color
Rho	480-510 nm	Night vision
SWS1	360-430 nm	UV - Blue
SWS2	440-460 nm	Blue
MWS	~ 530 nm	Green
LWS	~ 560 nm	Red

(Takenaka 2007)(Davies 2009)

<http://www.energymedc.com/images/light%20spectrum.jpg>

Opsins can also be categorized by certain conserved amino acids in particular locations.

Table 2: Amino acids found to be conserved in each opsin class

Opsin class	Conserved amino acids
Rho	E122, M207, H211, W265, A292, A295
SWS1	L46, F49, T52, F85, A89, T92, A114, S118
SWS2	P91, S94, L122, C127, S211, T261, A292
MWS/LWS	D82, S164, H181, Y261, T269, A292

(Takenaka 2007)(Davies 2009)

Pupil shape and lifestyle

- Pupils come in various shapes (Banks 2015)
- Correlations have been found between pupil shape and ecological niche (Banks 2015)
- Active vs. Ambush vs. prey

Vertical

Sub-circular

Circular

Horizontal

Research Question

- Do animals with different pupil shapes have different opsin populations?

<http://nextdoornature.org/tag/green-anole>

<http://www.lizardtypes.com/gecko-pictures/tokay-gecko-picture-5/>

Hypotheses

- Opsins in species with vertical pupils will be different than opsins in species with circular pupils.
- If different, which opsins are more likely to be present in species with a given pupil shape?

Methods

- Selected different species with either vertical or circular pupil shape
- Found opsin and rhodopsin AA sequences
- Used *Anolis carolinensis* as query sequence
- Protein BLAST in NCBI and UNIPROT databases
- Aligned sequences with MegAlign and MEGA
- Determined transmembrane domains at Center for Biological Sequence Analysis prediction servers

Methods

- Organized into a table in Excel
- Sequences sent to MEGA and phylogenetic trees were created for each opsin
- Chi square (χ^2) analysis between pupil shape

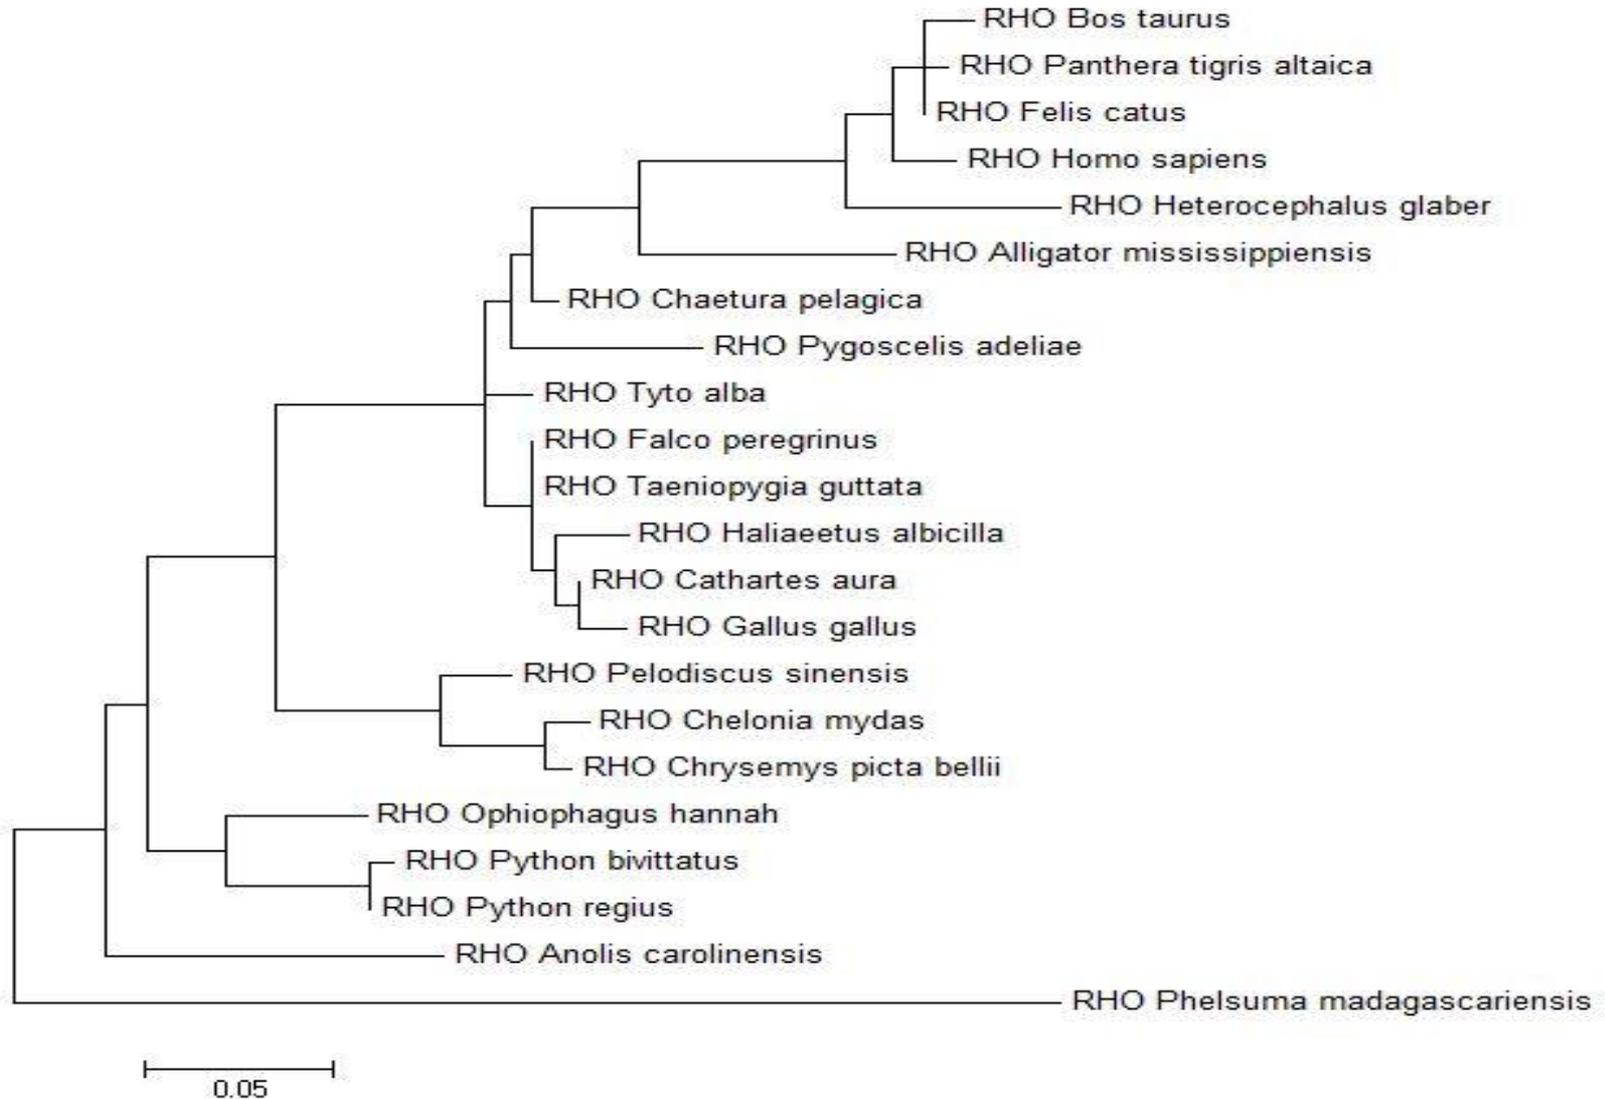

Opsin populations

<i>Gecko gecko</i>	tokay gecko	Reptile	Vertical	0*	1	1	1	0*
<i>Python bivittatus</i>	burmese python	Reptile	Vertical	1	1	0*	0*	1
<i>Python regius</i>	Ball python	Reptile	Vertical	1	1	0*	0*	1

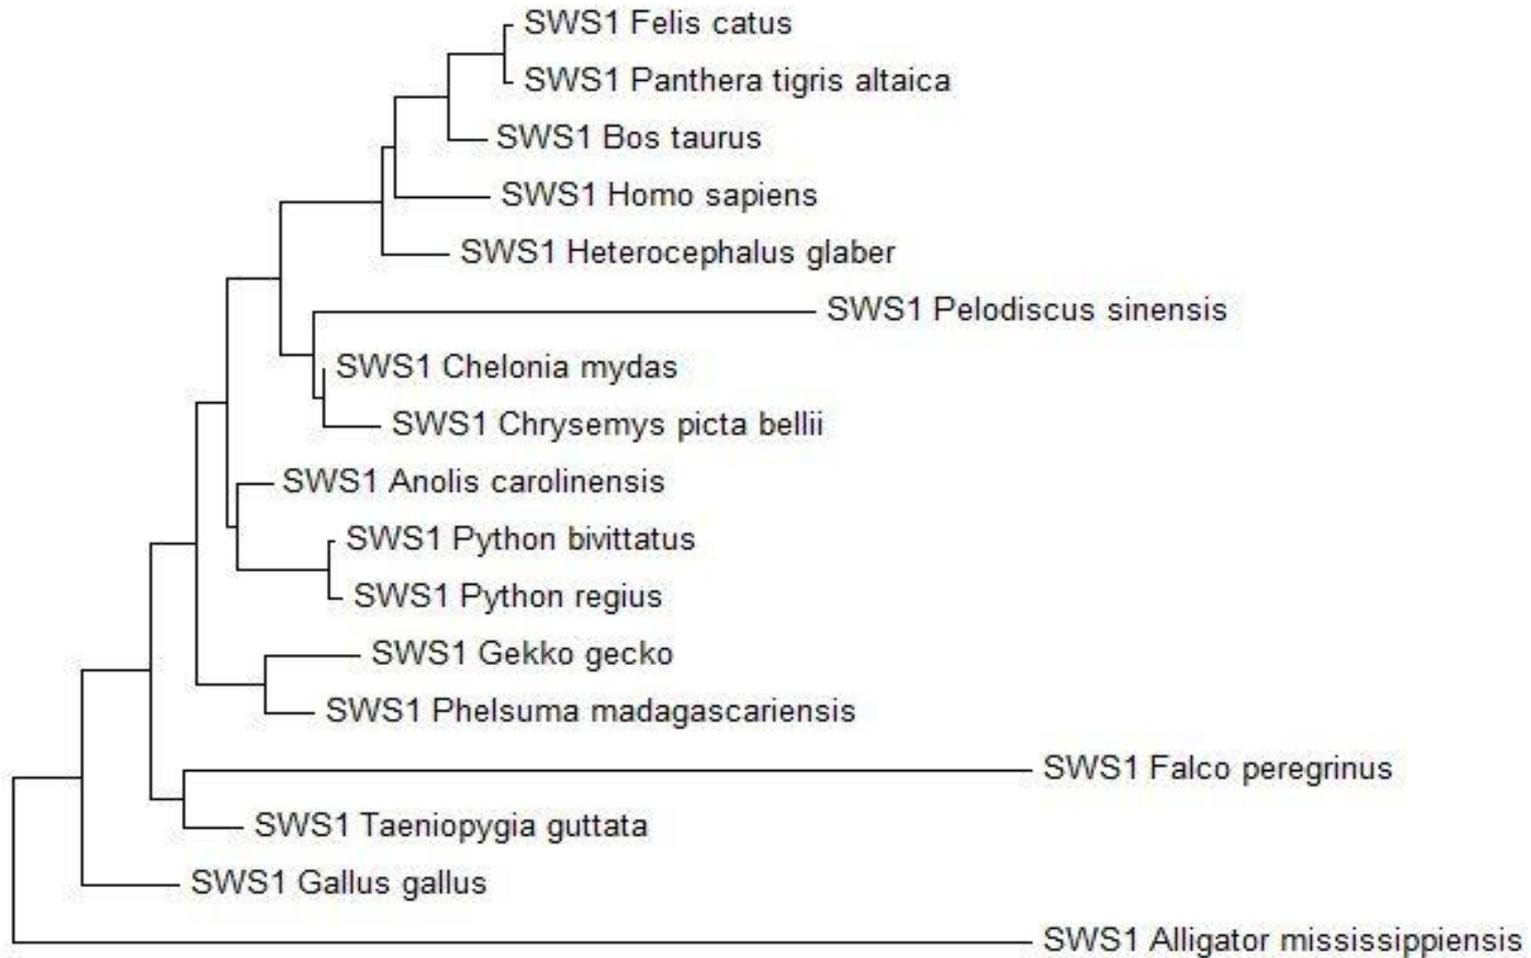

0*=sequence not found on NCBI or UniProt databases

$\chi^2 = 13.58917$, 8 degrees of freedom, $P=0.093122$

$\chi^2 = 6.36$, 2 degrees of freedom, $P<0.05$

Conclusion

- No significant correlation between opsin distribution and pupil shape. $P > 0.8$
- Between all taxa, significant different at $P = 0.1$
- There is significant different between birds and reptiles in distribution of SWS2 and MWS $P < 0.05$

In the future?

- Sequence more genomes
 - Fill in missing opsins with current species (?)
 - Check databases in the future
 - Add more species to databases
 - Black skimmer: bird with vertical pupils
